Commissioner for Patents

Please find a translation of JP 63-307987. The synthesis appears to be through the use of chlorosulphoic acid, followed by thionyl chloride to form a sulfonyl chloride analogue. To form the amine, amines are then reacted with the sulfonyl chloride. This seems to be a different pathway from that described by the applicant and therefore the declaration does not address the overall ability of the compounds to be made. See PTO-892
